Professional Summary

Self-driven Full Stack, DevOps, and Systems Developer with dual qualifications from Toi Ohomai (Level 5 & 6) and accelerated engineering training from Mission Ready HQ. Proven track record of architecting secure full-stack web platforms, orchestrating virtualised development environments via Docker, and implementing automated GitHub Actions pipelines. Brings a versatile systems engineering mindset spanning C#.NET, React, Node.js, and C++ to deliver robust software solutions under strict architectural rubrics. Highly adaptable learner with extensive experience in collaborative, production-grade Git-flow frameworks seeking an entry-level software engineering role.

Skills

Programming Languages: C#.NET, C++, TypeScript, JavaScript (ES6+), Python, SQL (PostgreSQL, MySQL)

Web & Backend Architecture: React, Next.js, Node.js, Express, RESTful APIs, ASP.NET MVC, Microservices

DevOps & Automation: CI/CD Pipelines, GitHub Actions, Docker, Docker Compose (.yaml), Azure Cloud, Environment Isolation (.env)

Game Development: Unreal Engine 5, Blueprints, Enhanced Input, Character Movement, Animation Blueprints, Lighting Systems

Tools & Frameworks: Git, GitHub, Visual Studio, Rider, VS Code, Blender, Stripe Integration, Figma, Adobe XD

Core Engineering Knowledge: OOP, Data Structures, Design Patterns, 3D Math, Debugging, Optimization, Clean Architecture, Cross-Browser Stability (Safari, Chrome, Firefox, Edge)

Languages: English (Fluent), Portuguese

Professional Experience

Mission Ready HQ - Software Engineering Accelerator | Auckland / Remote

Full-Stack & DevOps Engineer | May 2026 - Present

- **Production-Grade Source Control:** Commended for highly descriptive Git commits using standardised prefixes and providing detailed, structural feedback on peer Pull Requests.
- **Security-First Engineering:** Mitigated critical injection vulnerabilities by constructing database communication layers utilizing SQL Prepared Statements and dynamic restricted table lists.
- **Architectural Strategy:** Formulated a unified, minimized code logic framework that securely handled full-stack login and signup pathways for multiple user roles simultaneously.
- **State & Navigation Lifecycle:** Built programmatic UI routing structures within complex full-stack user flows using advanced React ecosystem hooks (useNavigation).
- **Technical Evaluation:** Analysed and compared alternative frontend frameworks (Vue and Solid vs. React) to defend technical choices based on ecosystem scale and industry adoption.

Independent Projects & Open Source | Mount Maunganui

Software & Gameplay Developer | 2024 - Present

- **GastroGrid (SaaS Platform):** Architected a scalable kitchen management solution using Docker and docker-compose.yml to guarantee isolated multi-container local environments across database and backend services. Engineered GitHub Actions workflows to automate linting, unit testing, and secure .env secret management.
- **Shooter-Game (Unreal Engine 5):** Built a full third-person character controller in C++ governing movement, sprinting, stamina, crouches, and jumps. Implemented Enhanced Input with custom mapping contexts while debugging input-scaling and CharacterMovement issues. Integrated Animation Blueprints and built a dynamic day/night lighting system using Directional Light, SkyLight, and Post Process Volumes.
- **Collaborative Code Quality:** Actively contribute to open-source GitHub repositories focused on React tooling, TypeScript utilities, and UI component libraries. Submit formal pull requests, open technical issues, participate in community design discussions, and collaborate with maintainers to scale documentation and code quality.

Toi Ohomai Institute of Technology - Academic Projects | Tauranga

Full-Stack Software Developer (Capstone & Mission Projects) | 2022 - 2024

- **UI/UX & Deployment:** Developed complete, highly responsive application pages directly translating rigid design layouts into code; fully optimized and tested for cross-browser stability (Chrome, Safari, Firefox, Edge).
- **Clean Code Compliance:** Engineered self-documenting codebases enforcing strict naming conventions (camelCase/snake_case), localized scope variable declarations, modular function grouping, and clear inline comments for non-intuitive logic.
- **Secure Git Workflows:** Implemented source control security precautions in GitHub, actively participating in formal pull request approvals, formative inline peer reviews, and systematic defect fixing.
- **Technical Presentations:** Co-delivered technical architectural walkthroughs to stakeholders detailing frontend, backend, and relational database mechanics under strict operational time constraints.

Education

Toi Ohomai - Te Pukenga | Tauranga

Diploma in Software Development (Level 6) | 2023 - 2024

- **Core Focus:** RESTful APIs, microservices, UX/UI, enterprise solutions, testing strategies, Agile, and clean code principles.
- **C#.NET Specialization:** Deep emphasis on OOP, Design Patterns, Algorithms, Windows Forms, ASP.NET MVC, and XAML.

Toi Ohomai - Te Pukenga | Tauranga

Certificate in Web Design & Development (Level 5) | 2022 - 2023

- **Core Focus:** Frontend architectures (HTML, CSS, JS), backend data engineering (SQL, PostgreSQL, Node.js), and end-to-end web product management.

Strengths & Interests

Strong Debugging Mindset: Skilled at diagnosing input-scaling issues, compiler errors, performance bottlenecks, and structural application defects.

Fast Tech Adaptability: Rapidly learns and applies new engines, container workflows, frameworks, and deployment automations.

Interests: Game engine architecture, rendering pipelines, physics systems, AI tools, SaaS platforms, performance optimization, and containerization.
