Professional Summary

Self-driven Full Stack, DevOps, and Systems Developer with dual qualifications from Toi Ohomai (Level 5 & 6) and accelerated engineering training from Mission Ready HQ. Owned release readiness and software architecture for cohort delivery while building CI/CD pipelines with GitHub Actions, applying test-driven development, coordinating Agile work in Jira, and containerising services with Docker. Hands-on across C#/.NET, React, Node.js, C++, and AI-assisted insurance and vehicle-data tools. Seeking an entry-level to junior-intermediate software engineering role.

Skills

Programming Languages: C#/.NET, C++, TypeScript, JavaScript (ES6+), Python, SQL (PostgreSQL, MySQL)

Web & Backend Architecture: React, Next.js, Node.js, Express, RESTful APIs, ASP.NET MVC, Microservices

AI & Data: Google Gemini API, Azure Custom Vision, MongoDB (Mongoose)

DevOps & Automation: CI/CD Pipelines, GitHub Actions (lint, test, build), Docker, Docker Compose (.yaml), Azure Cloud, .env / GitHub Secrets, Git (fork, branch, pull, PR, review)

Agile & Collaboration: Jira, Sprint Planning, Daily Stand-ups, Retrospectives, Peer Code Review

Game Development: Unreal Engine 5, Blueprints, Enhanced Input, Character Movement, Animation Blueprints, Lighting Systems

Tools & Frameworks: Visual Studio, Rider, VS Code, Blender, Stripe Integration, Figma, Adobe XD, Git, GitHub, Jira

Core Engineering Knowledge: OOP, Data Structures, Design Patterns, 3D Math, Debugging, Optimisation, Clean Architecture, Test-Driven Development (TDD), Cross-Browser Stability (Safari, Chrome, Firefox, Edge)

Languages: English (Fluent), Portuguese

Professional Experience

Mission Ready HQ - Software Engineering Accelerator | Auckland / Remote

Full-Stack & DevOps Engineer | May 2026 - Present

- **Release Engineering Leadership:** Led the development team as release engineer, owning branching strategy, fork/pull workflows, PR review gates, and merge checks before release.
- **CI/CD Pipeline Ownership:** Built GitHub Actions pipelines (install, type-check, test, build) on pull requests and main; practised TDD with Vitest; kept secrets in .env and GitHub Secrets.
- **Cohort Delivery (3 projects):** Shipped Tina (Next.js / TypeScript / Google Gemini API insurance assistant for Turners New Zealand), an Express Turners AI vehicle classifier using Azure Custom Vision, and a Node.js MongoDB Auction CLI with Commander, Inquirer, and Mongoose.
- **Agile Delivery (Jira):** Coordinated Agile delivery with Jira boards, sprint items, stand-ups, and retrospectives while guiding full-stack architecture decisions.
- **Containerised Environments:** Developed Docker and docker-compose setups for consistent local and runtime environments across services.
- **Secure Full-Stack Auth:** Constructed multi-role login and signup flows with SQL prepared statements and restricted role tables to reduce injection risk.
- **State & Navigation Lifecycle:** Built programmatic UI routing across multi-role flows with React Router (useNavigate).

Independent Projects & Open Source | Mount Maunganui

Software & Gameplay Developer | 2024 - Present

- **GastroGrid (SaaS Platform):** Architected a kitchen management SaaS using Docker and docker-compose.yml for isolated multi-container local environments. Engineered GitHub Actions workflows to automate linting, unit testing, and secure .env secret management.
- **Shooter-Game (Unreal Engine 5):** Built a third-person character controller in C++ (movement, sprint, stamina, crouch, jump). Implemented Enhanced Input mapping contexts, Animation Blueprints, and a dynamic day/night lighting system.
- **Collaborative Code Quality:** Contributed to open-source React/TypeScript repositories through pull requests and documentation improvements.

Toi Ohomai Institute of Technology - Academic Projects | Tauranga
Full-Stack Software Developer (Capstone & Mission Projects) | 2022 - 2024

- **UI/UX & Deployment:** Developed responsive application pages from design layouts; tested for cross-browser stability across four browsers (Chrome, Safari, Firefox, Edge).
- **Clean Code Compliance:** Wrote self-documenting codebases with consistent naming, modular structure, and clear comments for non-intuitive logic.
- **Secure Git Workflows:** Practised GitHub pull-request approvals, inline peer reviews, and systematic defect fixing.
- **Technical Presentations:** Co-delivered architectural walkthroughs covering frontend, backend, and relational database design under time constraints.

Education

Toi Ohomai - Te Pukenga | Tauranga
Diploma in Software Development (Level 6) | 2023 - 2024

- **Core Focus:** RESTful APIs, microservices, UX/UI, enterprise solutions, testing strategies, Agile, and clean code principles.
- **C#/ .NET Specialisation:** Deep emphasis on OOP, Design Patterns, Algorithms, Windows Forms, ASP.NET MVC, and XAML.

Toi Ohomai - Te Pukenga | Tauranga
Certificate in Web Design & Development (Level 5) | 2022 - 2023

- **Core Focus:** Frontend architectures (HTML, CSS, JS), backend data engineering (SQL, PostgreSQL, Node.js), and end-to-end web product management.

Strengths & Interests

Strong Debugging Mindset: Diagnoses input-scaling issues, compiler errors, performance bottlenecks, and structural application defects.

Fast Tech Adaptability: Quickly learns and applies new engines, container workflows, frameworks, and deployment automations.

Interests: Game engine architecture, SaaS platforms, containerisation, CI/CD, AI tooling.
