

Rodrigo De Fraga Nunes

Full Stack, DevOps & Gameplay Developer

📍 Mount Maunganui, Bay of Plenty, New Zealand (Open to relocation – Auckland) ✉️ rodrigo79rfn@gmail.com
☎️ 021 225 3555 🌐 d-dev-folio.vercel.app 🐙 github.com/RodrigoNunes2004 🔗 linkedin.com/in/rodrigo

Professional Summary

Self-driven Full Stack, DevOps, and Gameplay Developer with a strong foundation in modern web architectures, automated workflows, and systems engineering. Experienced in building responsive full-stack applications (React, Next.js, PostgreSQL) and programming core mechanics in C++ and C#/.NET. Proven track record of orchestrating virtualized development environments using Docker, implementing secure GitHub Actions pipelines, and delivering robust software solutions under strict architectural rubrics. Highly adaptable learner seeking entry-level software engineering roles or remote freelance opportunities.

Skills

Programming Languages: C++, C#, Python, TypeScript, JavaScript, SQL

DevOps & Automation: CI/CD Pipelines, GitHub Actions, Docker, Docker Compose (.yaml), Environment Isolation (.env)

Web & Backend: React, Next.js, Node.js, Express, PostgreSQL, REST APIs, Relational Database Design

Game Development: Unreal Engine 5, Blueprints, Enhanced Input, Character Movement, Animation Blueprints, Lighting Systems

Tools & Platforms: Git, GitHub, Azure, Visual Studio, Rider, VS Code, Blender, Stripe Integration

Core Knowledge: OOP, Data Structures, Design Patterns, 3D Math, Debugging, Optimization, Clean Architecture, Cross-Browser Stability

Languages: English (Fluent), Portuguese

Projects

GastroGrid – SaaS Kitchen Management System (In Progress)

2025 – Present

Scalable SaaS platform for chefs and catering enterprise teams.

- **DevOps & Containerization:** Orchestrated virtualized local development environments using Docker and docker-compose.yml, ensuring isolated multi-container consistency across database and backend services.
- **Automated CI/CD Pipelines:** Engineered GitHub Actions workflows to automate code linting, unit testing, and secret environment management via secure .env structures.
- **Full-Stack Feature Ownership:** Building recipe, costing, and inventory management modules, maintaining responsibility for end-to-end frontend and backend page implementations.
- **Emerging Tech Integration:** Conducting deep-dive research to analyze, select, and integrate AI-powered features for automated menu planning and predictive event preparation.

Shooter-game – Unreal Engine 5 Game Project

2024 – 2025

Solo third-person Unreal Engine project focused on engine systems and gameplay programming.

- **Character Systems:** Built full third-person character controller in C++ governing movement, sprinting, stamina, crouches, and jumps.
- **Input & Locomotion:** Implemented Enhanced Input with custom input actions and mapping contexts while debugging input-scaling and CharacterMovement issues.
- **Environment & Animation:** Created a dynamic day/night lighting system using Directional Light, SkyLight, and Post Process Volumes; integrated Animation Blueprints for locomotion state transitions.

Full-Stack Software Developer (Capstone & Mission Projects) — Toi Ohomai

Academic Capstone Projects

- **UI/UX & Deployment:** Developed complete, highly responsive application pages directly translating rigid design layouts into code; fully optimized and tested for cross-browser stability (Chrome, Safari, Firefox, Edge).
- **Clean Code Compliance:** Engineered self-documenting codebases enforcing strict naming conventions (**camelCase/snake_case**), localized scope variable declarations, modular function grouping, and clear inline comments for non-intuitive logic.
- **Secure Git Workflows:** Implemented source control security precautions in GitHub, actively participating in formal pull request approvals, formative inline peer reviews, and systematic defect fixing.
- **Technical Presentations:** Co-delivered technical architectural walkthroughs to stakeholders detailing frontend, backend, and relational database mechanics under strict operational time constraints.

Experience

Independent Projects & Open Source, Software Developer

2022 – Present

Game, web, and SaaS application development.

- **Repository Optimization:** Actively contribute to GitHub repositories focused on React tooling, TypeScript utilities, and UI component libraries.
- **Collaborative Review:** Submit formal pull requests, open technical issues, participate in community design discussions, and collaborate with maintainers to scale documentation and code quality.
- Developed Unreal Engine gameplay systems using C++ and Blueprints alongside secure full-stack web platforms using Next.js.

Education

Toi Ohomai – Te Pūkenga, Diploma in Software Development (Level 6)

2023 – 2024

- Core Focus: RESTful APIs, microservices, UX/UI, enterprise solutions, testing strategies, Agile, and clean code principles.
- C#/.NET Specialization: Deep emphasis on OOP, Design Patterns, Algorithms, Windows Forms, ASP.NET MVC, and XAML.

Toi Ohomai – Te Pūkenga, Web Design & Development (Level 5)

Jan 2022

- Core Focus: Frontend architectures (HTML, CSS, JS), backend data engineering (SQL, PostgreSQL, Node.js), and end-to-end web product management.

Strengths

Strong Debugging Mindset: Skilled at diagnosing input-scaling issues, compiler errors, performance bottlenecks, and structural application defects.

Fast Tech Adaptability: Rapidly learns and applies new engines, container workflows, frameworks, and deployment automations.

Collaborative Communicator: Proven track record in professional peer evaluations, cross-functional project presentations, and open-source ecosystems.

Interests

Game engine architecture, rendering pipelines, physics systems, AI tools, SaaS platforms, performance optimization, and containerization.
